Exclusive vinyl
When comfort meets technology

The exclusive moderna v-rigid premium vinyl collection combines the best of all (flooring) worlds! The high-quality oak imitations combine with particularly easy-to-maintain surfaces. Sophisticated design and beautiful feel go hand in hand. Moderna v-rigid premium is 100% waterproof, warm to the foot and easy on the joints. Despite its low surface weight, moderna v-rigid premium is particularly dimensionally stable. Thanks to the MULTICLIC system, the vinyl floor can be laid very easily – even on slightly uneven subfloors such as tiles. The integrated damping layer provides additional walking comfort and makes the flooring pleasantly quiet. An absolute all-round talent!

- Easy on the joints
- Suitable for conservatories
- Warm to the foot
- Dimensionally stable to 15 m
- Quiet
- Levels out uneven surfaces
- Easy to maintain
- Extremely durable
- 100% waterproof
- Easy to lay thanks to patented click systems

A down-to-earth all-round talent

Very simple, very uncomplicated: without a doubt, moderna v-solid makes the perfect roommate. And it has a lot to offer: For example, modern and chic oak decors that accentuate your own individual lifestyle. But its technical properties are also convincing across the board. The flooring is waterproof, robust and dimensionally stable as well as being absolutely easy to maintain. moderna v-solid is easy to lay cleanly and quickly, and without any tiresome sawing work, because the flooring can be cut with a cutter knife. Invite v-solid into your home, too!

Profiles and plug-in profiles (rails)

The perfect transition

The practical profiles allow you to master even the most difficult transitions quickly and easily.

Transition profiles

The classic solution for the transitions between rooms. Just a detail? Not at all. When correctly installed they can create an ambience of elegance. High-quality, screwable aluminium profiles offer you many individual design options.

Compensation profiles

Compensation profiles provide seamless transitions between flooring at different heights to prevent tripping. Screw in or plug in elements, with cable ducts, height adjustment and much more – You will find the right solution for every application in our highly varied product range!

End profiles

For the perfect edge finish or a clean separation between tiles and natural stone flooring we offer you a wide variety of options. Top class aluminium profiles ensure a professional finish, quick and simple installation and individual look.

moderna surfaces

The same holds true for all our floors: The proof of the pudding is in the eating. Take a close look and feel the surface structure of the different floors. Our range of different decors is just as varied and versatile as the wishes of our customers are individual and multifaceted. Get your own impression of how our surfaces look and feel, or take a sample with you and test it at home. Look out for important parameters such as print image, embossing and surface finish, because this will simplify your purchasing decision. Based on our many years of experience, we have created the moderna surfaces through innovative new developments, which achieve an authentic and genuine wood impression and look strikingly similar to the original, even in the area of natural stone or tile imitation.

Structure with special pore effect

Embossed surfaces convey even more authenticity for modern laminate flooring - especially with the special pore effect printing. Here, the pores, filled knots and cracks are individually matched to the decorative image underneath.

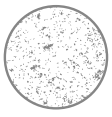

Natural wood structure

The natural wood structure and matt appearance produces the look and feel of naturally oiled real wood.

Stone structure

The rough and coarse embossing perfectly reproduces a stone structure. The flooring looks like a stone and even feels like a stone. Yet it's as warm as a wooden floor. The stone structure of our vinyl flooring is indistinguishable from a normal stone tile surface.

Key
Product advantages of vinyl flooring

MADE IN GERMANY

Made in Germany
As a company with a long tradition and a German manufacturer, it is very important to us to produce high-quality and appealing products. This is why we are one of the world's leading flooring manufacturers. As a family business, we thus see it as our responsibility to manufacture with a broad vision and strive to unite quality and look. The many years of cooperation with our partners and customers in the interior design sector have consistently helped us to meet our high standards and are therefore of particular importance to us.

100% waterproof
Can be installed in humid rooms, such as bathrooms. This does not include outdoor areas and wet rooms, e.g. saunas, shower cubicles, steam rooms and rooms with a floor drain.

Extremely durable
When it comes to durability, our vinyl floorings can compete with laminate or parquet any day. In fact, our moderna vinyl floorings are almost unbeatable in terms of robustness and durability.

Easy to maintain
As a rule, vinyl floors are very easy to maintain. All you need to do is vacuum the surface regularly and wipe it with a damp cloth, depending on how dirty it is.

Easy to lay thanks to patented click systems
Thanks to patented click systems, you can install the flooring themselves in no time at all. Even if the floor is laid as a floating installation (i.e. no bonding to the subfloor), you can be sure that the system will withstand all stresses and strains. Our current systems have been successfully on the market for many years and have always proved their worth.

MULTICLIC®

Multiclic connection
This click system connection is based on the patented UNICLIC system, which is the most widely used worldwide.
Moderna relies on the Multiclic connection because it is one of the best both technically and functionally. The individual panels can be clicked together very quickly with the pre-tension provided by the tongue and groove connection and installation is easy and secure. The additional possibility of horizontal joining simplifies laying even in hard-to-reach places (such as under radiators or door frames). Multiclic is characterised by a high precision fit, flush positioning with respect to height as well as its seamless and form fitting connections.

Well-suited for renovation projects
Due to the low installation height, moderna vinyl flooring can be easily laid on the existing subfloor without having to make any additional adjustments to the door frames or other adjacent components, for example.

Dimensionally stable to 15 m
Whether it's cold or hot – temperature fluctuations won't affect your new vinyl flooring. It'll stay in shape. That makes it possible to lay up to 15 metres of flooring continuously without any unwanted expansion joints or profiles, creating a modern living environment.

Phthalate-free
Free of questionable plasticisers in accordance with the REACH regulation.

Indoor air comfort
Certified quality feature to improve interior air quality (low VOC emissions).

Easy on the joints
The moderna v-rigid premium vinyl floor has an elastic damping layer. This construction is easy on the joints and enhances your living comfort.

Levels out uneven surfaces
With the special rigid core board, moderna vinyl floorings level out irregularities better than conventional LVT vinyl. This simplifies installation and reduces the need for extensive preparations for laying the flooring.

Quiet
The multi-layer product structure helps to ensure that modern vinyl floorings are quieter than conventional hard floors.

Warm to the foot
One of the main advantages of flooring over tiles is that it feels warm to the foot.

Suitable for conservatories
moderna rigid vinyl floorings are suitable for conservatories.

Extra-wide tile format
The “moderna v-rigid premium tile” and “v-solid tile” ranges have a large format in keeping with current trends. Create space and a calm atmosphere with large formats.
